

# Concept Engineering with the Motioneers

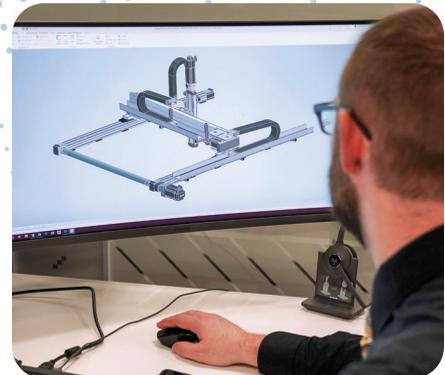

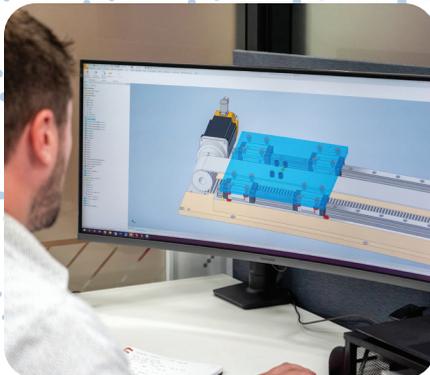

Throughout its 80+ year history, Evolution Motion Solutions has continually pushed itself to the frontlines of development for advanced motion control solutions for industrial applications. As our customers evolve with technology, they need a partner who deeply understands their applications, industries, and businesses. Evolution realized the next natural step is streamlining the advanced motion control solution process, so we developed the Motioneer.

The Motioneers are a team of engineers dedicated to creating custom conceptual engineering motion control solutions for unique industrial applications. With extensive industry knowledge and experience, each Motioneer has the tools to explore concepts, solve challenges, and create solutions specific to customer needs.

## What is Concept Engineering?

The Motioneers become your collaborative partner through concept engineering—a creative service in which the Motioneers create custom conceptual engineering solutions designed to match your application.

## The Comprehensive Knowledge of the Motioneers

The Motioneers can assist you in all areas of advanced motion control, sharing your passion for your projects. These innovative thinkers utilize vast experience and industry knowledge to explore concepts, solve unique challenges, and devise the most effective solutions for your specific needs. The Motioneers are ready to help you with tasks like selecting components for an application or advancing an idea from the initial concept to constructing a complete and complex sub-system.

Your Motioneer comes from a select team of application experts who are impassioned by and embrace the powers of conceptualization, collaboration, and integration. Your project will become their task at hand.

### Industries

- Aerospace
- Automotive
- FMCG
- General Automation
- Life Sciences
- Semiconductor

### Skills

- Application and Product Technical Support
- BOM Development
- Collaborative Concept Design and Modeling
- Product Selection and Configuration
- System Layout

### Technologies

- Conveyance
- Electric Drives & Controls
- Hydraulics
- Mechatronics
- Pneumatics
- Safety & Sensing
